10:19am - Furosemide 40mg tablets - 2 tablets

10:19am - Laxido Orange oral powder sachets sugar free - one

PRN taken

1:01pm - OxyNorm liquid 1mg/ml oral solution - 1-2ml 1-2mg

General Observations

Notes

"

08:30- 09:00:

I arrived at DM's and he had just had a wash from the live in carer. He had breakfast made by his wife. I sat with him after he had his breakfast, he informed me that he had a good night and e appeared to be in good spirits.

Medication administered:

I administered laxido, senna, furosemide and quetiapine.

-I enquired DM's daughter about his medication does going up and she said we should stick to 2 furosemides and 1/2 quetepine per day instead of what the prescription says. I asked her to communicate with the GP or forward the email about the prescriptions to angel care and she said 'If Angel Care look back at emails from the palliative team they will see the points at which the

furosemide was changed. We have to alter it depending on how swollen his legs are and at one point they were bad and the dose was increased to one extra tablet in the afternoon, and after a few weeks once his legs were ok the afternoon dose was dropped to stop him becoming dehydrated. The senna has always been variable depending on his bowels movements.'

09:00-10:00:

After breakfast

Dennis used the toilet bowel and I emptied it, he is reading his paper now.

10:00-11:00:

DM is reading the paper. I asked him if he wanted to eat something he informed me that he wanted some tomato soup and bread which I made him and he finished it. DM continues to read his paper.

12:30-13:30:

DM used the urine bottle and I assisted him. With emptying it. He preferred to use it in the garage so I went with him but when we came back he was really breathless. I administered oxynorm 2ml at 12:55 pm. I then made him a cup of coffee as per his request"
